

Solve each system of equations using the Elimination Method.

1.  $\begin{cases} x = 11 + y \\ 2x + y = 19 \end{cases}$

2.  $\begin{cases} -4x + 9y = 9 \\ x - 3y = -6 \end{cases}$

3.  $\begin{cases} x + 2y = 11 \\ x - 4y = 2 \end{cases}$

Write the equation of each graph.

6. Explain, using complete sentences, how you would copy the segment below using a compass and straight edge.

7. Explain, using complete sentences, how you would create a rhombus using a compass and straightedge.
