

Solve the following inequalities and graph the solutions on the number lines.

1)  $5 \geq x + 7$

2)  $-\frac{4}{5}x < 4$

3)  $-4(x - 1) > 8$

4)  $3x \geq 4$

5) Which operations (addition, subtraction, multiplication, and division) are commutative and which are not? Use examples to justify your answer.

Solve the following problems:

6)  $-8 - 6$

7)  $-10 - (-4)$

8)  $5 + -2$

9)

$$m\angle QFC = \underline{\hspace{2cm}}$$

$$m\angle QFA = \underline{\hspace{2cm}}$$

$$m\angle BFC = \underline{\hspace{2cm}}$$

$$x = \underline{\hspace{2cm}}$$

10) Find the volume of the following shape:
